

The returns
problem is
bigger than
you think.

Don't just manage retail returns. *Prevent* them.

Returns aren't just a cost of doing business — they're a silent margin killer. Industry return rates routinely climb above 30%, and with each returned item comes a cascade of hidden costs: reverse logistics, restocking labor, markdown risk, inventory distortion, and eroded customer lifetime value. Most retailers know returns are a problem. But few know that 73% are controllable. Returnalyze changes that.

AI-Powered Returns Prevention Platform

- ✓ **One Source of Truth**
Say goodbye to siloed data. Returnalyze consolidates returns transactions together with structured and unstructured data sources into a single view, enhancing cross-departmental alignment.
- ✓ **Root-Cause Clarity**
Proprietary AI algorithms rapidly analyze millions of data points to detect patterns and root causes of returns that human analysts miss — uncovering opportunities to reduce returns by 15-20% in the first year.

- ✓ **Recommended Actions**
Automated insights and trend alerts are paired with clear, prioritized actions tailored to each business function so your teams know exactly where to focus.
- ✓ **Quantified Business Impact**
Because every opportunity is sized in dollars, Returnalyze helps you prioritize the highest-impact initiatives and demonstrate immediate ROI. Industry benchmarks help you see how your measure up to your peers.
- ✓ **Role-based Dashboards**
No more one-size-fits-all reporting. Each team member sees the insights most relevant to their function — delivered in the context of their work so insights don't die on dashboards — they drive decisions.
